

INTRODUCING

CyberAudit-Web Enterprise Location Graphics

Location Graphics is a new enhancement for CyberAudit-Web Enterprise 7.1 which enables users to directly pinpoint where CyberLocks and Communicators are located – visually. Icons of CyberLock devices may be placed on maps or photos to illustrate where they are located throughout a building, city, state, or country.

A landscape view allows you to locate Cyberlock devices in multiple locations. To view a specific location, simply click and zoom in. Both maps and photos can be uploaded.

An embedded floor plan graphic allows you to locate CyberLock devices within a specific location. To view a specific device, simply click and zoom in. By viewing the floor plan you can spot 'holes' in access control implementations.

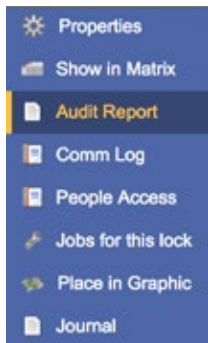

An embedded photo may display individual lock placements. Both horizontal and vertical images can be uploaded.

From an item icon you can . . .

Click to view lock details such as the audit trail or view a list of who has access to a lock

Click to view authoriser details such as network settings and properties
